

FEATURES

Multipoint LVDS transceivers (low voltage differential signaling driver and receiver pairs)

Switching rate: 100 Mbps (50 MHz)

Supported bus loads: 30 Ω to 55 Ω

Choice of 2 receiver types

Type 1 (ADN4690E/ADN4692E): hysteresis of 25 mV

Type 2 (ADN4694E/ADN4695E): threshold offset of 100 mV for open-circuit and bus-idle fail-safe

Conforms to TIA/EIA-899 standard for M-LVDS

Glitch-free power-up/power-down on M-LVDS bus

Controlled transition times on driver output

Common-mode range: -1 V to $+3.4$ V, allowing communication with 2 V of ground noise

Driver outputs high-Z when disabled or powered off

Enhanced ESD protection on bus pins

± 15 kV HBM (human body model), air discharge

± 8 kV HBM (human body model), contact discharge

± 10 kV IEC 61000-4-2, air discharge

± 8 kV IEC 61000-4-2, contact discharge

Operating temperature range: -40°C to $+85^\circ\text{C}$

Available in 8-lead (ADN4690E/ADN4694E) and 14-lead (ADN4692E/ADN4695E) SOIC packages

APPLICATIONS

Backplane and cable multipoint data transmission

Multipoint clock distribution

Low power, high speed alternative to shorter RS-485 links

Networking and wireless base station infrastructure

GENERAL DESCRIPTION

The ADN4690E/ADN4692E/ADN4694E/ADN4695E are multipoint, low voltage differential signaling (M-LVDS) transceivers (driver and receiver pairs) that can operate at up to 100 Mbps (50 MHz). Slew rate control is implemented on the driver outputs. The receivers detect the bus state with a differential input of as little as 50 mV over a common-mode voltage range of -1 V to $+3.4$ V. ESD protection of up to ± 15 kV is implemented on the bus pins. The parts adhere to the TIA/EIA-899 standard for M-LVDS and complement TIA/EIA-644 LVDS devices with additional multipoint capabilities.

The ADN4690E/ADN4692E are Type 1 receivers with 25 mV of hysteresis, so that slow-changing signals or loss of input does not lead to output oscillations. The ADN4694E/ADN4695E are Type 2 receivers exhibiting an offset threshold, guaranteeing the output state when the bus is idle (bus-idle fail-safe) or the inputs are open (open-circuit fail-safe).

FUNCTIONAL BLOCK DIAGRAMS

Figure 1.

Figure 2.

The parts are available as half-duplex in an 8-lead SOIC package (the ADN4690E/ADN4694E) or as full-duplex in a 14-lead SOIC package (the ADN4692E/ADN4695E). A selection table for the ADN469xE parts is shown in Table 1.

Table 1. High Speed M-LVDS Transceiver Selection Table

| Part No. | Receiver | Data Rate | SOIC | Duplex |
|--------------------------|----------|-----------|---------|--------|
| ADN4690E | Type 1 | 100 Mbps | 8-lead | Half |
| ADN4691E | Type 1 | 200 Mbps | 8-lead | Half |
| ADN4692E | Type 1 | 100 Mbps | 14-lead | Full |
| ADN4693E | Type 1 | 200 Mbps | 14-lead | Full |
| ADN4694E | Type 2 | 100 Mbps | 8-lead | Half |
| ADN4695E | Type 2 | 100 Mbps | 14-lead | Full |
| ADN4696E | Type 2 | 200 Mbps | 8-lead | Half |
| ADN4697E | Type 2 | 200 Mbps | 14-lead | Full |

¹ All typical values are given for V_{CC} = 3.3 V and T_A = 25°C.

² Jitter parameters are guaranteed by design and characterization. Values do not include stimulus jitter.

³ t_R = t_F = 0.5 ns (10% to 90%), measured over 30,000 samples.

⁴ Peak-to-peak jitter specifications include jitter due to pulse skew (t_{SK}).

⁵ t_R = t_F = 0.5 ns (10% to 90%), measured over 100,000 samples.

⁶ HP4194A impedance analyzer or equivalent.

ABSOLUTE MAXIMUM RATINGS

$T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted.

Table 6.

| Parameter | Rating |
|--|-----------------|
| V_{CC} | -0.5 V to +4 V |
| Digital Input Voltage (DE, \overline{RE} , DI) | -0.5 V to +4 V |
| Receiver Input (A, B) Voltage | |
| Half-Duplex (ADN4690E, ADN4694E) | -1.8 V to +4 V |
| Full Duplex (ADN4692E, ADN4695E) | -4 V to +6 V |
| Receiver Output Voltage (RO) | -0.3 V to +4 V |
| Driver Output (A, B, Y, Z) Voltage | -1.8 V to +4 V |
| ESD Rating (A, B, Y, Z Pins) | |
| HBM (Human Body Model) | |
| Air Discharge | ±15 kV |
| Contact Discharge | ±8 kV |
| IEC 61000-4-2 | |
| Air Discharge | ±10 kV |
| Contact Discharge | ±8 kV |
| ESD Rating (Other Pins, HBM) | ±4 kV |
| ESD Rating (All Pins, FICDM) | ±1.25 kV |
| Operating Temperature Range | -40°C to +85°C |
| Storage Temperature Range | -65°C to +150°C |

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

THERMAL RESISTANCE

θ_{JA} is specified for the worst-case conditions, that is, a device soldered in a circuit board for surface-mount packages.

Table 7. Thermal Resistance

| Package Type | θ_{JA} | Unit |
|--------------|---------------|------|
| 8-Lead SOIC | 121 | °C/W |
| 14-Lead SOIC | 86 | °C/W |

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATIONS AND FUNCTION DESCRIPTIONS

Figure 3. ADN4690E/ADN4694E Pin Configuration

Figure 4. ADN4692E/ADN4695E Pin Configuration

Table 8. Pin Function Descriptions

| ADN4690E/ ADN4694E Pin No. ¹ | ADN4692E/ ADN4695E Pin No. ¹ | Mnemonic | Description |
|---|---|-----------------|---|
| 1 | 2 | RO | Receiver Output. Type 1 receiver (ADN4690E/ADN4692E), when enabled: If $A - B \geq 50$ mV, then RO = logic high. If $A - B \leq -50$ mV, then RO = logic low. Type 2 receiver (ADN4694E/ADN4695E), when enabled: If $A - B \geq 150$ mV, then RO = logic high. If $A - B \leq 50$ mV, then RO = logic low. Receiver output is undefined outside these conditions. |
| 2 | 3 | \overline{RE} | Receiver Output Enable. A logic low on this pin enables the receiver output, RO. A logic high on this pin places RO in a high impedance state. |
| 3 | 4 | DE | Driver Output Enable. A logic high on this pin enables the driver differential outputs. A logic low on this pin places the driver differential outputs in a high impedance state. |
| 4 | 5 | DI | Driver Input. Half-duplex (ADN4690E/ADN4694E), when enabled: A logic low on DI forces A low and B high, whereas a logic high on DI forces A high and B low. Full-duplex (ADN4692E/ADN4695E), when enabled: A logic low on DI forces Y low and Z high, whereas a logic high on DI forces Y high and Z low. |
| 5 | 6, 7 | GND | Ground. |
| N/A | 9 | Y | Noninverting Driver Output Y. |
| N/A | 10 | Z | Inverting Driver Output Z. |
| 6 | N/A | A | Noninverting Receiver Input A and Noninverting Driver Output A. |
| N/A | 12 | A | Noninverting Receiver Input A. |
| 7 | N/A | B | Inverting Receiver Input B and Inverting Driver Output B. |
| N/A | 11 | B | Inverting Receiver Input B. |
| 8 | 13, 14 | V _{CC} | Power Supply (3.3 V ± 0.3 V). |
| N/A | 1, 8 | DNC | Do Not Connect. Do not connect to these pins. |

¹ N/A means not applicable.

THEORY OF OPERATION

The ADN4690E/ADN4692E/ADN4694E/ADN4695E are transceivers for transmitting and receiving multipoint, low voltage differential signaling (M-LVDS) at high speed (data rates up to 100 Mbps). Each device has a differential line driver and a differential line receiver, allowing each device to send and receive data.

Multipoint LVDS expands on the established LVDS low voltage differential signaling method by allowing bidirectional communication between more than two nodes. Up to 32 nodes can be connected on an M-LVDS bus.

HALF-DUPLEX/FULL-DUPLEX OPERATION

Half-duplex operation allows a transceiver to transmit or receive, but not both at the same time. However, with full-duplex operation, a transceiver can transmit and receive simultaneously. The ADN4690E/ADN4694E are half-duplex devices in which the driver and the receiver share differential bus terminals. The ADN4692E/ADN4695E are full-duplex devices that have dedicated driver output and receiver input pins. Figure 36 and Figure 37 show typical half- and full-duplex bus topologies, respectively, for M-LVDS.

THREE-STATE BUS CONNECTION

The outputs of the device can be placed in a high impedance state by disabling the driver or receiver. This allows several driver outputs to be connected to a single M-LVDS bus. Note that, on each bus line, only one driver can be enabled at a time, but many receivers can be enabled at the same time.

The driver can be enabled or disabled using the driver enable pin (DE). DE enables the driver outputs when taken high; when taken low, DE puts the driver outputs into a high impedance state. Similarly, an active low receiver enable pin (\overline{RE}) controls the receiver. Taking this pin low enables the receiver, whereas taking it high puts the receiver outputs into a high impedance state.

Truth tables for driver and receiver output states under various conditions are shown in Table 10, Table 11, Table 12, and Table 13.

TRUTH TABLES

Table 9. Truth Table Abbreviations

| Abbreviation | Description |
|--------------|----------------------|
| H | High level |
| L | Low level |
| X | Don't care |
| I | Indeterminate |
| Z | High impedance (off) |
| NC | Disconnected |

Driver, Half Duplex (ADN4690E/ADN4694E)

Table 10. Transmitting (see Table 9 for Abbreviations)

| Power | Inputs | | Outputs | |
|--------|--------|----|---------|---|
| | DE | DI | A | B |
| Yes | H | H | H | L |
| Yes | H | L | L | H |
| Yes | H | NC | L | H |
| Yes | L | X | Z | Z |
| Yes | NC | X | Z | Z |
| ≤1.5 V | X | X | Z | Z |

Driver, Full Duplex (ADN4692E/ADN4695E)

Table 11. Transmitting (see Table 9 for Abbreviations)

| Power | Inputs | | Outputs | |
|--------|--------|----|---------|---|
| | DE | DI | Y | Z |
| Yes | H | H | H | L |
| Yes | H | L | L | H |
| Yes | H | NC | L | H |

| ≤1.5 V | X | X | Z | Z |

Type 1 Receiver (ADN4690E/ADN4692E)

Table 12. Receiving (see Table 9 for Abbreviations)

| Power | Inputs | | Output | |
|-------|------------------------|-----------------|--------|--|
| | A – B | \overline{RE} | RO | |
| Yes | ≥50 mV | L | H | |
| Yes | ≤–50 mV | L | L | |
| Yes | –50 mV < A – B < 50 mV | L | I | |
| Yes | NC | L | I | |
| Yes | X | H | Z | |
| Yes | X | NC | Z | |
| No | X | X | Z | |

Type 2 Receiver (ADN4694E/ADN4695E)

Table 13. Receiving (see Table 9 for Abbreviations)

| Power | Inputs | | Output | |
|-------|------------------------|-----------------|--------|--|
| | A – B | \overline{RE} | RO | |
| Yes | ≥150 mV | L | H | |
| Yes | ≤50 mV | L | L | |
| Yes | 50 mV < A – B < 150 mV | L | I | |
| Yes | NC | L | L | |
| Yes | X | H | Z | |
| Yes | X | NC | Z | |
| No | X | X | Z | |

GLITCH-FREE POWER-UP/POWER-DOWN

To minimize disruption to the bus when adding nodes, the M-LVDS outputs of the device are kept glitch-free when the device is powering up or down. This feature allows insertion of devices onto a live M-LVDS bus because the bus outputs are not switched on before the device is fully powered. In addition, all outputs are placed in a high impedance state when the device is powered off.

FAULT CONDITIONS

The ADN4690E/ADN4692E/ADN4694E/ADN4695E contain short-circuit current protection that protects the part under fault conditions in the case of short circuits on the bus. This protection limits the current in a fault condition to 24 mA at the transmitter outputs for short-circuit faults between -1 V and +3.4 V. Any network fault must be cleared to avoid data transmission errors and to ensure reliable operation of the data network and any devices that are connected to the network.

RECEIVER INPUT THRESHOLDS/FAIL-SAFE

Two receiver types are available, both of which incorporate protection against short circuits.

The Type 1 receivers of the ADN4690E/ADN4692E incorporate 25 mV of hysteresis. This ensures that slow-changing signals or a loss of input does not result in oscillation of the receiver output. Type 1 receiver thresholds are ± 50 mV; therefore, the state of the receiver output is indeterminate if the differential between A and B is about 0 V. This state occurs if the bus is idle (approximately 0 V on both A and B), with no drivers enabled on the attached nodes.

Type 2 receivers (ADN4694E/ADN4695E) have an open circuit and bus-idle fail-safe. The input threshold is offset by 100 mV so that a logic low is present on the receiver output when the bus is idle or when the receiver inputs are open.

The different receiver thresholds for the two receiver types are illustrated in Figure 35. See Table 12 and Table 13 for receiver output states under various conditions.

Figure 35. Input Threshold Voltages

APPLICATIONS INFORMATION

M-LVDS extends the low power, high speed, differential signaling of LVDS (low voltage differential signaling) to multipoint systems where multiple nodes are connected over short distances in a bus topology network.

With M-LVDS, a transmitting node drives a differential signal across a transmission medium such as a twisted pair cable. The transmitted differential signal allows other receiving nodes that are connected along the bus to detect a differential voltage that can then be converted back into a single-ended logic signal by the receiver.

The communication line is typically terminated at both ends by resistors (R_T), the value of which is chosen to match the characteristic impedance of the medium (typically 100 Ω).

For half-duplex multipoint applications such as the one shown in Figure 36, only one driver can be enabled at any time. Full-duplex nodes allow a master slave topology, as shown in Figure 37. In this configuration, a master node can concurrently send and receive data to/from slave nodes. At any time, only one slave node can have its driver enabled to concurrently transmit data back to the master node.

- NOTES
 1. MAXIMUM NUMBER OF NODES: 32.
 2. R_T IS EQUAL TO THE CHARACTERISTIC IMPEDANCE OF THE CABLE USED.
